Production of Switches for HR-11A/B/C

1. The contractor for the subject equipment has not been successful in supplying a satisfactory switch for the RS-11 receivers and at the present time is completing delivery of prototype units minus the switch. The anticipated delivery date is 15 March 1957.

2. It is understood that the laboratory has designed a satisfactory switch for this equipment and it is therefore requested that 35 switches be fabricated for the 28 receivers to be delivered. The above quantity includes 7 switches for spare parts.

3. Installation of the switches in the receivers proper will be done by the contractor if delivery of the switches can be made prior to the contractors delivery of the equipment. In the event that delivery can not be accomplished in time the laboratory will be requested to install the switches.
